Sustainable Development Goals (SDGs): Targets and Indicators

Goal 1: Eliminate poverty in all its manifestations across the world

Goal 2: Eradicate hunger, enhance food security and nutrition, and support sustainable agricultural practices

Goal 3: Promote good health and well-being for people of all ages

Goal 4: Provide equitable and inclusive quality education and encourage lifelong learning opportunities

Goal 5: Attain gender equality and empower women and girls in all spheres
 Goal 6: Guarantee access to clean water and ensure sustainable sanitation management
 Goal 7: Ensure the availability of affordable, dependable, sustainable, and modern energy sources
 Goal 8: Foster inclusive and sustainable economic development, productive employment, and decent work opportunities
 Goal 9: Develop resilient infrastructure, encourage sustainable industrial growth, and promote innovation
 Goal 10: Minimize inequalities within nations as well as across countries
 Goal 11: Create cities and communities that are inclusive, safe, resilient, and sustainable
 Goal 12: Promote responsible consumption and sustainable production practices
 Goal 13: Take immediate and effective measures to address climate change and its consequences
 Goal 14: Protect and sustainably manage marine and ocean resources
 Goal 15: Conserve and restore land ecosystems, manage forests responsibly, and prevent land degradation and biodiversity loss
 Goal 16: Encourage peaceful and inclusive societies, ensure justice for all, and strengthen transparent and accountable institutions
 Goal 17: Enhance global cooperation and strengthen partnerships to achieve sustainable development objectives

Abstract

Agriculture pests damage crops and reduce yield. Manual pest detection is slow and difficult. This project uses a YOLO-based AI model to automatically detect agricultural pests from images, helping in early pest detection and crop protection.

Problem Statement

Manual identification of agricultural pests is time-consuming and often inaccurate. There is a need for an automated system to detect pests quickly and reduce crop loss.
